Proline™ Dimensional Guide

Piping systems engineered to meet the most demanding industrial applications

Together, with our internationally recognized partner, Agru, Asahi/America provides the most comprehensive and technologically advanced industrial piping systems available. Proline™ Polypropylene offers more sizes, fittings and pressure ratings than from any other single source. This extensive product offering is supported by an experienced and knowledgeable group of staff engineers, technicians and sales agents, all ready to assist you with your application's requirements.

Proline™ Polypropylene

Polypropylene (PP) is a member of the polyolefin family. PP is one of the lightest plastics known. It possesses excellent chemical resistance to many acids, alkalis and organic solvents. PP is one of the best materials to use for systems exposed to varying PH levels, as many plastics do not handle both acids and bases well. It is not recommended for use with hydrocarbons and aromatics. Its upper temperature limit is 195° (90° C). Proline™ is available in 150 psi and 45 psi standard. Options in 90 psi are available. Proline® is available from 3/8" (16mm) to 54" (1400mm).

Note to this Guide:

The system is metric sized based on Standard Dimension SDR pipe sizes. **Dimensions given are for reference only.** All systems, regardless of material, maintain a constant pipe and fitting OD. Imperial (inch) ODs are provided as nominal sizes only.

Within the SDR System, nominal pressure ratings vary according to material but not OD. Pressure ratings generally remain constant within material and SDR classification. For example: all SDR21 PVDF pipe and fittings are rated to 16 bar or 230psi. Exceptions, if any, may be found in cases where valves or threads carry ratings independent of SDR sizing.
