Page 14

Features:

- For the discharge of condensate sub-cooled up to 30K
- Automatic ventilation during start up and operation of the plant
- Robust and insensitive to waterhammer
- Integrated non-return protection
- Design:
 - with inside strainer - BR 600
 - with outside strainer - BR 601 (Y)
- Optimized design for quick installation (PN40, DN15-25)
- Gasketless sealing of the screw cap (PN40, DN15-25)
- Installation in any position (except cover / Screw cap downwards)
- Subcooling of condensate is continuously adjustable (observe the operation instructions)
- The exchange of the controller is possible without disturbing the pipe connections

Bimetallic steam trap made of cast iron

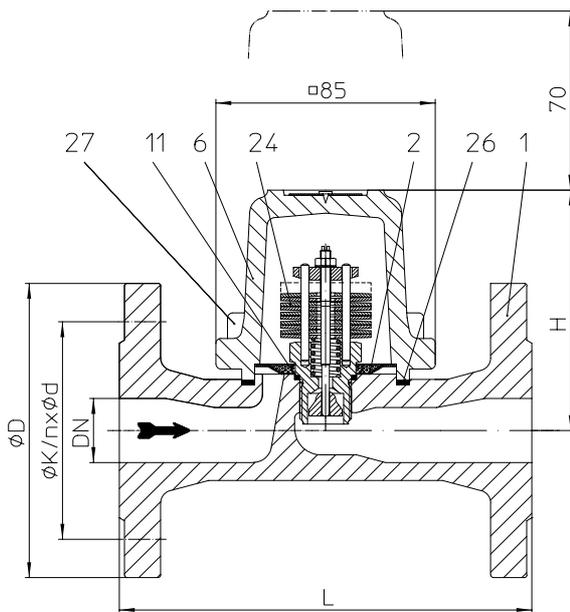

Fig. 600...1 with flanges

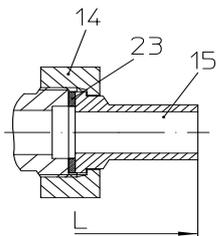

Fig. 600...5
Union with butt weld ends

- Thermostatic steam trap with corrosion resistant and water hammer proof bimetallic controller
- Automatic ventilation during start up and operation of the plant
- Integrated non-return protection
- Inside strainer
- Installation in any position, except cover downwards
- Subcooling of condensate is continuously adjustable (observe the operation instructions)

Capacity chart

Capacity chart

The capacity chart shows the maximum flow at factory setting. (Other factory-settings for the sub-cooling on request.)

Curve 1

Maximum flow of hot condensate at ΔT approx. 10K below boiling temperature.

Curve 2

Maximum flow at condensate sub-cooling at ΔT approx. 30K

Curve 3

Maximum flow at cold condensate at about 20°C (during start-up of a cold installation).

The condensate-temperature determines the aperture of the controller. The capacity is increasing with the sub-cooling temperature of the condensate.

- Thermostatic steam trap with corrosion resistant and water hammer proof bimetallic controller
- Automatic ventilation during start up and operation of the plant
- Integrated non-return protection
- with Inside strainer - BR 600
with outside strainer - BR 601 (Y)
- Optimized design for quick installation
- Installation in any position, except screw cap downwards
- Subcooling of condensate is continuously adjustable (observe the operation instructions)
- Service advantage thanks to screw cap without sealing
- Controller available for operating range:
 - Controller R13 - up to 13 bar inlet pressure
 - Controller R22 - up to 22 bar inlet pressure
 - Controller R32 - up to 32 bar inlet pressure
- Option:
 - Outside strainer with blow down valve (pos. 46)
 - Ball valve with adapter for blow down (pos. 56) with integrated strainer
 (Observe operating and installation instructions!)

Capacity chart PN160

Capacity chart

The capacity chart shows the maximum flow of hot and cold condensate at factory setting.
(For operating pressures below 5bar, a correction of the factory setting acc. to the indication of the manufacturer is recommended.)

Curve 1

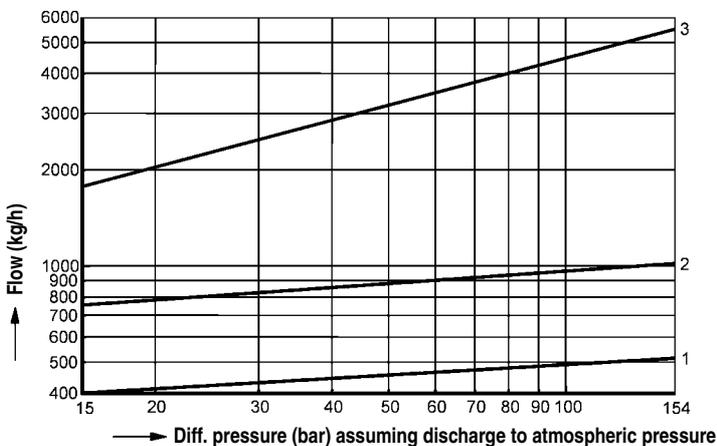

Maximum flow quantity of hot condensate at approx. 10 K below boiling temperature.

Curve 2

Maximum flow quantity of hot condensate at approx. 30 K below boiling temperature.

Curve 3

Maximum flow at cold condensate at about 20°C (during start-up of a cold installation).

Capacity chart PN250

High pressure - Bimetallic steam trap made of high temperature steel

- Thermostatic steam trap with corrosion resistant and water hammer proof bimetallic controller
- For steam specially at high pressure ranges
- Automatic ventilation during start up and operation of the plant
- Integrated non-return protection
- Discharge valve also works as checkvalve
- Inside strainer
- Installation in any position, except cover downwards
- Subcooling of condensate is continuously adjustable (observe the operation instructions)
- The exchange of the controller is possible without disturbing the pipe connections

Informations about pipe welding of steam traps

Welding groove acc. to DIN 2559

The body materials of our steam traps which are for welding into the pipe are as following:	1.0619+N	GP240GH+N acc. to DIN EN 10213-2 / SA 216 WCB
	1.0460	P250GH acc. to DIN EN 10222-2 / SA 105
	1.0401	C15 acc. to DIN 17210
	1.5415	16Mo3 acc. to DIN EN 10028 / SA 182 F1
	1.4541	X6CrNiTi18-10 acc. to DIN EN 10088 / SA 182 F321
	1.7335	13CrMo4-5 acc. to DIN EN 10028 / SA 182 F12
	1.7380	10CrMo 9-10 acc. to DIN EN 10028 / SA 182 F22
	1.4903	X 10 CrMoVNb 91 acc. to VdTÜV Data sheet 511/3 (06.99) / SA 182 F91
	1.4905	X 11 CrMo WVNb 9-1-1 acc. to VdTÜV Data sheet 522/3 (06.99)

Due to our experience, we recommend to apply an electric welding process.

Because of the different material compositions and wall thickness of the steam traps and the pipe gas welding shall not be applied. Quenching cracks and coarse grain structure may develop.

On bimetallic steam traps face-to-face of 95 mm or less, the bimetallic controller has to be disassembled prior to welding. After the traps have cooled down to the ambient temperature the bimetallic controller shall be fitted again into the body.

Steam traps with socket-weld ends shall only be welded by arc welding (welding process 111 acc. to DIN EN 24063).

If during the time of warranty others than the manufacturer or by the manufacturer authorized persons are interfering in the product and/or the setting, the right of claim for warranty will lapse!

Information / restriction of technical rules to be observed!

Operating instructions can be ordered on request by phone (+49 52 07) 994-0 or fax (+49 52 07) 994-158 or 159.

Selection criteria:

- Steam pressure
- Back pressure
- quantity of condensate
- Nominal diameter / pressure
- Type of connection
- Controller
- Material
- Place of service or kind of steam consumer

Example for order data:
