SPECIFICATION

The valve shall meet the ASME Section VIII code for liquid, steam, air and gas services. It shall be "UV" National Board Certified. It shall have non-adjustable blowdown that shall be less than 10% for steam, air or gas and less than 20% for liquid. The valve shall consist of a unitized bonnet design guaranteeing proper guiding and making the valve extremely dependable in terms of pop

action, seat tightness and repeatability. The disc shall have a pivoting design which optimizes the seating performance. The valve shall have a full nozzle for optimum flow performance. Internal trim (excepting the base) shall be stainless steel. The valve shall meet the API 527 leakage standard requiring bubble tight shutoff up to 90% of set pressure.

FIGURE 800 SERIES SOFT SEATS

Safety Valves with metal seats will start to leak at 90% of set pressure. A Spence Safety Valve equipped with a soft seat seals on both the metal and soft seats (see illustration). As a result, it will not begin to leak until system pressure reaches 95% of set pressure, minimizing system energy loss.

The o-rings in standard soft seat safety valves tend to blow out during discharge. Spence Soft Seat Safety Valves utilize a flat soft seat insert in the disc assembly of the valve that stays in place during operation, thus providing hassle-free operation.

There are many troublesome applications where using a Spence Soft Seat Safety Valve can reduce costly downtime and repair costs. Consider a Spence Soft Seat Safety Valve for:

- Operating very close to set pressure
- Heavy vibration
- Hard-to-hold fluids
- Occasional foreign particles
- Icing problems
- Pipe strain due to excessive discharge
